## REPORT

**1. Aims and objectives of the Programme:** In this growing industrial and technological era, pollution has become a paramount problem. Tree plantation is important to save our earth from destruction and the lives surviving on it. Trees provide us oxygen, filter CO<sub>2</sub> and prevent soil erosion, maintaining the ecological balance and many more. Also, they provide us food, shelter and save us from global warming. Thus, it is imperative to sensitize college students about the environment. The NSS unit of the GGDC Mangalkote planned and organized tree plantation event on 25<sup>th</sup> April, 2022 under “Green Campus” initiative with the following objectives:

- To create and maintain a healthy environment and ecosystem
- To increase the availability of nutritional supplements provided by trees
- To reduce emitted green house gases in the environment

## **2. Proceedings of the Programme (Description):**

**a) Name of the programme:** Tree Plantation Programme

**b) Date:** 25.04.2022

**c) Time:** 12 Noon

**d) Venue:** Mangalkote Block Development Office

**e) Organizers of the Programme:** NSS Unit

**f) Brief Summary of the Programme:** On 25<sup>th</sup> April 2022 at 12 noon the NSS Unit-1 of GGDC Mangalkote with other students and the coordinator carried out a Tree Plantation Programme in Mangalkote BDO with the initiative of creating a green campus. The members of the unit planted saplings of different variety to increase plants and trees to beautify the surrounding and help to build a sustainable environment, reducing global warming and pollution. The unit further imparted knowledge about the benefits of a green campus and how trees and plants help to maintain the balance in the ecosystem to the local youths and villagers.

**Participants:** NSS Unit of GGDC Mangalkote and other students of the college.

**Result of the program:** The authorities of the BDO along with the staff and local community people were encouraged to plant trees and to look after them by watering regularly so that surrounding environment gets cooler especially during summer. The unit also interacted with the villagers about the benefits of various medicinal plants which can be useful to them in times of need. The villagers ensured to save nature in their own way by maintaining greenery in their neighbourhood and localities.

**Conclusion:** Tree plantation programmes are indeed very useful in creating good habit among students and youth to love nature and to maintain greenery in our society as trees are being cut down rampantly to build houses and roads for transportation. The NSS unit thus with great interest planted saplings to spread awareness about the significance of a green campus. The programme was a success when the BDO officials as well as other local people joined hands ensuring to continue this green drive further to save our planet earth and make it congenial for the common people to live a healthy life.

**The NSS Programme Coordinator and Volunteers engaged in the tree plantation programme inside Mangalkote BDO campus on 25.4.22**

### **Beyond the Campus Green Initiative of the NSS Unit, GGDC, Mangalkote**

Therefore, we conclude that trees should be regularly planted to save the mankind and the animal world. Tree plantation and its after-care is a pleasing work too. We can get much pleasure in planting trees and in taking care of them. The central conclusion from the analysis is that role of plantation forests, in meeting future wood and fiber demands, will increase during the next 30 years, irrespective of future rates of plantation establishment. Trees in the ground already largely determine wood supplies from forest plantation for the next decade. In many countries, a considerable increase in areas of plantation forests reaching harvestable age will occur. Beyond 2010, plantation production forecasts are increasingly dependent on assumptions of new planting rates, and on assumptions of improvements in annual increments. There is scope, depending on policy decisions and markets, for forest plantations to play a dominant role in industrial wood and fibre supplies. A more likely scenario is that the proportion of forest plantation-grown wood will increase, but natural forests will continue to supply a modest majority of industrial round wood.

## NOTICE

No.MGC/NSS/ 5/22

Date: 18.04.2022

It is hereby notified for the information of all concerned that the NSS Unit of the college is going to organize a **Tree Plantation Programme** on **25.04.2022** in the **Mangalkote Block Development Office** premises. This is part of the **Promotion of Greenery and Afforestation Drive** of the NSS Unit of the college (in association with the IQAC) in the adjoining areas.

NSS volunteers are requested to participate in the program.
